

# Carbon Report

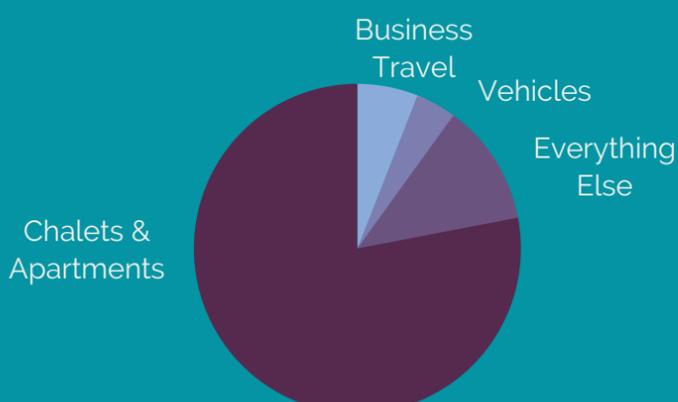

## 171kg

Our average footprint (CO<sub>2</sub>e) per booked night in '21/22

Holidays, trips, adventures - they're lots of fun. But, like most things, they leave an impact on the planet. We see it as our responsibility to minimise this, not just for this year but every year to come.

We've worked with carbon consultancy ecollective to measure our carbon footprint and create a plan to reach net zero carbon emissions.

## Where does it come from?

Everything Else - Working from Home, the office the website, post, etc.

## What does it mean?

Is that number meaningless to you? We get it. Each night we book has the same footprint as:

**85 bottles of champagne**

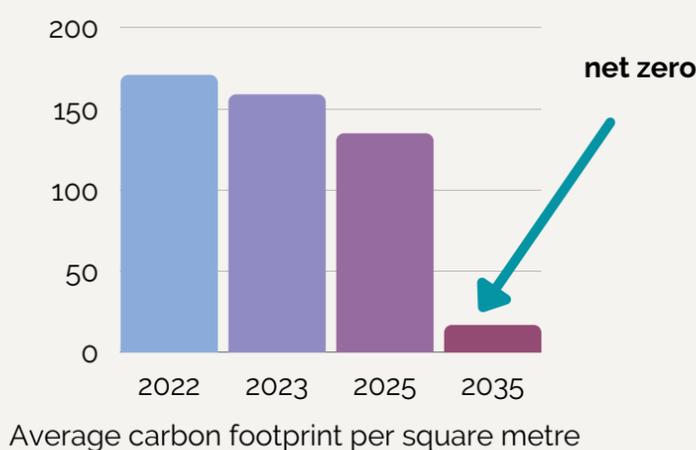

**575 miles**

**0.7 trees**

**per customer**

## The Plan

We're aiming to reach **net zero** by:

## 2035

We're going to do this by:

- Becoming a zero scope 1 & 2 business.
- Working with property owners to make properties more efficient.
- Improving how we work internally and who we work with.

## We've got a long way to go.

We are taking ownership of our carbon footprint but removing it will take time. That's why year on year we're taking steps to be better than we were the year before.

## How do we compare?

One week in our 6 bedroom Chalet Le Grenier

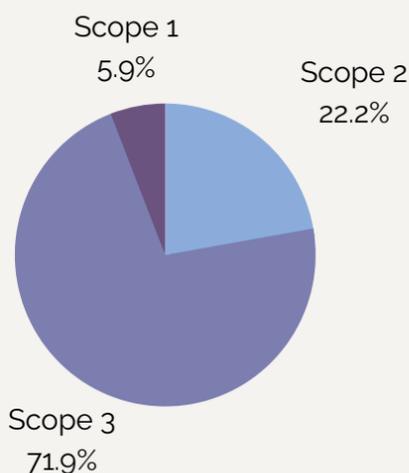

One week in a Maldives hotel room

A Return flight to San Francisco in Business Class

## Our emissions breakdown:

Calculating the carbon footprint of businesses is a complex and evolving science. We are taking action to reduce our footprint today while simultaneously increasing our measurements' accuracy year on year.

This is the start of our journey and we do not have all the answers. But that shouldn't stop anyone from doing the right thing.
